## **Measure Domain**

## **PRIMARY MEASURE DOMAIN**

Use of Services

The validity of measures depends on how they are built. By examining the key building blocks of a measure, you can assess its validity for your purpose. For more information, visit the <u>Measure Validity</u> page.

#### SECONDARY MEASURE DOMAIN

Does not apply to this measure

## **Brief Abstract**

#### **DESCRIPTION**

This measure is used to assess the number of provider-level primary Cesarean deliveries per 100 deliveries.

Potential additional bias may result from clinical differences not identifiable in administrative data, so supplemental risk adjustment with linked birth records or other clinical data may be desirable. As a utilization indicator, the construct validity relies on the actual inappropriate use of procedures in hospitals with high rates, which should be investigated further.

## **RATIONALE**

About 30% of personal health care expenditures in the United States go towards hospital care, and the rate of growth in spending for hospital services has only recently leveled out after several years of increases following a half a decade of declining growth. Simultaneously, concerns about the quality of health care services have reached a crescendo with the Institute of Medicine's series of reports describing the problem of medical errors and the need for a complete restructuring of the health care system to improve the quality of care. Policymakers, employers, and consumers have made the quality of care in U.S. hospitals a top priority and have voiced the need to assess, monitor, track, and improve the quality of inpatient care.

Cesarean delivery is the most common operative procedure performed in the United States and is associated with higher costs than vaginal delivery. Despite a recent decrease in the rate of Cesarean deliveries, many organizations have aimed to monitor and reduce the rate. Cesarean delivery has been identified as an overused procedure.

The overall Cesarean delivery rate cannot determine appropriate use, but the variation in rates across institutions and regions may, if the variations do not merely reflect variations in patient disease severity and comorbidities.

# PRIMARY CLINICAL COMPONENT

Maternity care; primary Cesarean delivery

## **DENOMINATOR DESCRIPTION**

All deliveries

#### Exclude cases:

- Abnormal presentation, preterm delivery, fetal death, multiple gestation diagnosis codes
- Breech procedure codes
- Previous Cesarean delivery diagnosis in any diagnosis field

**Note**: Refer to the Technical Specifications document for specific International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and Diagnosis-related Groups (DRGs) codes.

## **NUMERATOR DESCRIPTION**

Number of Cesarean deliveries, identified by Diagnosis-related Group (DRG), or by International Classification of Diseases, Nine Revision, Clinical Modification (ICD-9-CM) procedure codes\* if they are reported without a 7491 hysterotomy procedure, among cases meeting the inclusion and exclusion rules for the denominator

<sup>\*</sup>Refer to the Technical Specifications document for specific ICD-9-CM codes and DRGs.

# **Evidence Supporting the Measure**

## **EVIDENCE SUPPORTING THE VALUE OF MONITORING USE OF SERVICE**

 One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

# **Evidence Supporting Need for the Measure**

## **NEED FOR THE MEASURE**

Monitoring and planning Variation in use of service

## **EVIDENCE SUPPORTING NEED FOR THE MEASURE**

AHRQ quality indicators. Guide to inpatient quality indicators: quality of care in hospitals - volume, mortality, and utilization [version 3.1]. Rockville (MD): Agency for Healthcare Research and Quality (AHRQ); 2007 Mar 12. 91 p.

## **State of Use of the Measure**

#### **STATE OF USE**

Current routine use

## **CURRENT USE**

External oversight/State government program Monitoring and planning

# **Application of Measure in its Current Use**

## **CARE SETTING**

Hospitals

## PROFESSIONALS RESPONSIBLE FOR HEALTH CARE

Physicians

## LOWEST LEVEL OF HEALTH CARE DELIVERY ADDRESSED

Single Health Care Delivery Organizations

## **TARGET POPULATION AGE**

Unspecified

## **TARGET POPULATION GENDER**

Female (only)

## STRATIFICATION BY VULNERABLE POPULATIONS

Unspecified

# **Characteristics of the Primary Clinical Component**

# INCIDENCE/PREVALENCE

The rate of Cesarean delivery in the United States increased from 5.5% in 1970 to a high of 24.7% in 1988 and decreased to 20.7% in 1996.

## **EVIDENCE FOR INCIDENCE/PREVALENCE**

Menard MK. Cesarean delivery rates in the United States. The 1990s. Obstet Gynecol Clin North Am1999 Jun;26(2):275-86. [24 references] PubMed

#### **ASSOCIATION WITH VULNERABLE POPULATIONS**

Unspecified

## **BURDEN OF ILLNESS**

Unspecified

# **UTILIZATION**

Unspecified

## **COSTS**

Unspecified

# **Institute of Medicine National Healthcare Quality Report Categories**

# **IOM CARE NEED**

Not within an IOM Care Need

# **IOM DOMAIN**

Not within an IOM Domain

## **Data Collection for the Measure**

## **CASE FINDING**

Users of care only

#### **DESCRIPTION OF CASE FINDING**

All deliveries (see the "Denominator Inclusions/Exclusions" field)

#### **DENOMINATOR SAMPLING FRAME**

Patients associated with provider

## **DENOMINATOR INCLUSIONS/EXCLUSIONS**

## **Inclusions**

All deliveries

## **Exclusions**

Exclude cases:

- Abnormal presentation, preterm delivery, fetal death, multiple gestation diagnosis codes
- Breech procedure codes
- Previous Cesarean delivery diagnosis in any diagnosis field

**Note**: Refer to the Technical Specifications document for specific International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and Diagnosis-related Groups (DRGs) codes.

#### RELATIONSHIP OF DENOMINATOR TO NUMERATOR

All cases in the denominator are not equally eligible to appear in the numerator

## **DENOMINATOR (INDEX) EVENT**

Clinical Condition Institutionalization Therapeutic Intervention

# **DENOMINATOR TIME WINDOW**

Time window is a single point in time

## **NUMERATOR INCLUSIONS/EXCLUSIONS**

#### **Inclusions**

Number of Cesarean deliveries, identified by Diagnosis-related Group (DRG), or by International Classification of Diseases, Nine Revision, Clinical Modification (ICD-9-CM) procedure codes\* if they are reported without a 7491 hysterotomy

procedure, among cases meeting the inclusion and exclusion rules for the denominator

\*Refer to the Technical Specifications document for specific ICD-9-CM codes and DRGs.

#### **Exclusions**

Unspecified

# MEASURE RESULTS UNDER CONTROL OF HEALTH CARE PROFESSIONALS, ORGANIZATIONS AND/OR POLICYMAKERS

The measure results are somewhat or substantially under the control of the health care professionals, organizations and/or policymakers to whom the measure applies.

## **NUMERATOR TIME WINDOW**

Institutionalization

## **DATA SOURCE**

Administrative data

## **LEVEL OF DETERMINATION OF QUALITY**

Does not apply to this measure

# **PRE-EXISTING INSTRUMENT USED**

Unspecified

## **Computation of the Measure**

## **SCORING**

Rate

## **INTERPRETATION OF SCORE**

Undetermined

## **ALLOWANCE FOR PATIENT FACTORS**

Analysis by subgroup (stratification on patient factors, geographic factors, etc.)

## **DESCRIPTION OF ALLOWANCE FOR PATIENT FACTORS**

Observed (raw) rates may be stratified by hospitals, age groups, race/ethnicity categories, and payer categories.

Risk adjustment by age is recommended.

Application of multivariate signal extraction (MSX) to smooth risk adjusted rates is also recommended.

## STANDARD OF COMPARISON

External comparison at a point in time External comparison of time trends Internal time comparison

# **Evaluation of Measure Properties**

#### **EXTENT OF MEASURE TESTING**

Each potential quality indicator was evaluated against the following six criteria, which were considered essential for determining the reliability and validity of a quality indicator: face validity, precision, minimum bias, construct validity, fosters real quality improvement, and application. The project team searched Medline for articles relating to each of these six areas of evaluation. Additionally, extensive empirical testing of all potential indicators was conducted using the 1995-97 Healthcare Cost and Utilization Project (HCUP) State Inpatient Databases (SID) and Nationwide Inpatient Sample (NIS) to determine precision, bias, and construct validity. Table 2 in the original measure documentation summarizes the results of the literature review and empirical evaluations on the Inpatient Quality Indicators. Refer to the original measure documentation for details.

## **EVIDENCE FOR RELIABILITY/VALIDITY TESTING**

AHRQ quality indicators. Guide to inpatient quality indicators: quality of care in hospitals - volume, mortality, and utilization [version 3.1]. Rockville (MD): Agency for Healthcare Research and Quality (AHRQ); 2007 Mar 12. 91 p.

## **Identifying Information**

#### **ORIGINAL TITLE**

Primary Cesarean delivery rate (IQI 33).

## **MEASURE COLLECTION**

Agency for Healthcare Research and Quality (AHRQ) Quality Indicators

## **MEASURE SET NAME**

Agency for Healthcare Research and Quality (AHRQ) Inpatient Quality Indicators

## **DEVELOPER**

Agency for Healthcare Research and Quality

# **FUNDING SOURCE(S)**

Agency for Healthcare Research and Quality (AHRQ)

## COMPOSITION OF THE GROUP THAT DEVELOPED THE MEASURE

The Agency for Healthcare Research and Quality (AHRQ) Quality Indicators are in the public domain and the specifications come from multiple sources, including the published and unpublished literature, users, researchers, and other organizations. AHRQ as an agency is responsible for the content of the indicators.

# FINANCIAL DISCLOSURES/OTHER POTENTIAL CONFLICTS OF INTEREST

None

## **ADAPTATION**

Measure was not adapted from another source.

## **RELEASE DATE**

2004 Jul

## **REVISION DATE**

2008 Feb

#### **MEASURE STATUS**

This is the current release of the measure.

This measure updates previous versions:

- AHRQ quality indicators. Guide to inpatient quality indicators: quality of care in hospitals -- volume, mortality, and utilization [version 3.0]. Rockville (MD): Agency for Healthcare Research and Quality (AHRQ); 2006 Feb 20. 99 p.
- AHRQ quality indicators. Inpatient quality indicators: technical specifications [version 3.1]. Rockville (MD): Agency for Healthcare Research and Quality (AHRQ); 2007 Mar 12. 37 p.
